

Crystal Clear Soluble Vitamin D3 for Beverages

Unique Advantages of CapsuDar®

The CapsuDar® D₃ CWD is a crystal clear, highly soluble vitamin D₃ perfectly suited to the beverage industry.

It is a microencapsulated, water-dispersible preparation that protects the normally fat-soluble vitamin against light, oxidation and acids which normally inactivate vitamin D₃ when added to beverage applications.

It is especially suited for use in flavored or functional waters.

How Vitamin D3 works

- Dosages of Vitamin D used in clinical studies range from 200IU (5mcg) to 10,000IU (250mcg) daily.
- Recent studies suggest that all men and women who are concerned about their overall health should monitor their blood levels of vitamin D more closely, because deficiency of vitamin D may increase the risk of morbidity and mortality.
- Vitamin D plays an important role in maintaining healthy bones and teeth, maintaining healthy muscles, supporting the nervous and cardiovascular systems, as well as promoting a healthy metabolism.

CapsuDar®

Vitamin D, known as the “sunshine” vitamin, is formed in the body by the action of the sun’s ultraviolet rays on the skin, and then converted by the liver and kidneys to the active forms of vitamin D in the body. Vitamin D deficiency can result from inadequate dietary intake, insufficient exposure to sunlight, and malfunctions of the liver and kidneys. Vitamin D deficiency can occur in all age groups.
